PROFESSIONAL SUMMARY

Senior Android Developer with **7+ years of experience** building, modernizing, and maintaining production Android applications using Kotlin and Java.

Experienced in taking ownership of mature Android applications, delivering features end-to-end, integrating third-party platforms, modernizing legacy codebases, resolving complex production issues, and handling Android platform and Play Store migrations.

Strong background in **real-time systems, live tracking, payments, service-booking workflows, chat, audio/video calling, multi-application synchronization, and multi-tenant Android platforms.**

Comfortable working independently as the primary Android developer as well as collaborating within larger engineering teams on shared products and complex application ecosystems.

TECHNICAL SKILLS

Languages

Kotlin, Java

Android UI

Jetpack Compose, XML, XML-to-Compose Migration, Material Design

Architecture & Design

MVVM, Clean Architecture, Modular Architecture, Repository Pattern, App Refactoring, Reusable Components

Asynchronous Programming

Kotlin Coroutines, Flow, StateFlow

Dependency Injection

Hilt, Dagger 2

Networking & Data

Retrofit, OkHttp, REST APIs, JSON, Room, Paging 3

Real-Time Systems

MQTT, Real-Time Job Updates, Live Status Updates, Real-Time Communication

Maps & Location

MapmyIndia SDK, Live Location Tracking, OSRM Routing, Location-Based Workflows

Payments & SDK Integrations

Stripe, Branch Payment Gateway, Isometrik Calling & Chat SDK, Zoom SDK, ExoPlayer

Firebase

Firebase Crashlytics, Firebase Services

Android Platform & Releases

Target SDK Migrations, Android Version Compatibility, Google Play Console, Play Store Releases, Edge-to-Edge UI, System Insets, Dependency Upgrades

Tools

Android Studio, Git, Gradle

EMPLOYMENT HISTORY

Android Developer — AppScrip

Jan 2022 – Aug 2026 | Remote

Android Developer — Intelliar Tech Labs Pvt. Ltd.

Dec 2020 – Jan 2022

Android Developer — Chip N Web Technologies

Jun 2019 – Dec 2020

Android Developer — Stealth Technocrats

Nov 2017 – Oct 2018

SELECTED PRODUCTION PROJECTS

Flex Crew — Workforce Management Platform

AppScrip

Google Play:

<https://play.google.com/store/apps/details?id=com.flexcrew.provider>

- Served as the **sole Android developer responsible for end-to-end development and maintenance** of the provider application.
- Owned feature development, production support, architecture improvements, maintenance, and release-related work.
- Developed workflows covering **job assignment, shift management, workforce operations, service lifecycle, and payments.**

- Integrated and maintained **Branch Payment Gateway** functionality.
- Diagnosed and resolved production crashes, API issues, UI defects, compatibility problems, and complex business-flow bugs.
- Modernized parts of the application through refactoring, dependency upgrades, Android compatibility changes, and target SDK migrations.

Eazy Customer / Eazy Life — Multi-Service Consumer Platform

AppScrip

Google Play:

<https://play.google.com/store/apps/details?id=com.easy.super>

- Worked as part of a dedicated **3-developer Android team** on a large production platform supporting services, delivery, healthcare, payments, and other consumer workflows.
- Implemented **Isometrik chat and audio/video calling** across Customer and Provider applications.
- Later integrated **Zoom-based cross-application calling**, including call handling and production issue resolution.
- Worked on the complete service-booking lifecycle from booking creation through provider assignment, service execution, tracking, and completion.
- Built customer-facing provider tracking and synchronization between Customer and Provider applications.
- Worked with **MapmyIndia and OSRM-based routing** for location and route-related functionality.
- Contributed to integrations between the native Android application and **Flutter-based modules** within the wider platform.
- Supported integration and maintenance of **AI-powered functionality** introduced into the product.

Eazy Provider — On-Demand Services Platform

AppScrip

Google Play:

<https://play.google.com/store/apps/details?id=com.provider.eazy>

- Led development and maintenance of the provider-side Android application.
- Implemented the provider service lifecycle including **accept, reject, start, track, and complete service requests**.
- Used **MQTT** for booking and service-event communication between the provider and wider platform.
- Integrated **Isometrik Calling and Chat SDK** for customer-provider communication.
- Built location-dependent provider workflows required throughout active service requests.
- Investigated complex issues spanning booking state, communication SDKs, backend responses, and provider-side business logic.

- Contributed to reusable functionality supporting multiple service domains and customized application variants.

Multi-Tenant Android Platform — MMD, LS Pro, OTG & Other Applications

AppScrip

- Maintained and extended a shared Android platform used to create customized applications across healthcare, beauty, subscriptions, home services, and other on-demand domains.
- Worked across both provider and customer applications while supporting product-specific requirements on top of shared functionality.
- Contributed to **legacy XML modernization and XML-to-Jetpack Compose migration**.
- Refactored shared modules and reusable components to improve maintainability across multiple product variants.
- Diagnosed production stability issues using **Firebase Crashlytics**.
- Handled Android platform migrations involving **edge-to-edge layouts, window insets, keyboard behavior, dependency compatibility, and build-system changes**.
- Resolved **Google Play Console warnings, API-level requirements, dependency issues, and release blockers**.

Eazy Healthcare — Healthcare Platform

AppScrip

- Developed Android functionality for doctors and healthcare professionals.
- Implemented healthcare-specific appointment and service workflows.
- Integrated **Zoom SDK** for video consultations between users and healthcare providers.
- Customized provider-side functionality to support healthcare-specific business requirements.
- Supported production maintenance for appointment flows, communication features, APIs, and third-party integrations.

PREVIOUS ANDROID DEVELOPMENT EXPERIENCE

Across roles at **Intelliar Tech Labs, Chip N Web Technologies, and Stealth Technocrats**, contributed to multiple production Android applications involving:

- Native Android development using Kotlin and Java
- REST API integration and application business logic
- XML-based Android interfaces
- Firebase services
- ExoPlayer and media functionality

- Existing codebase maintenance and feature development
- Crash resolution, stability improvements, and performance optimization
- Production releases and ongoing application support

EDUCATION

Bachelor of Computer Applications (BCA)

Punjabi University, Patiala

2016
